AI Powered Document Storage and Search

A Smarter Way to Find Needles in Haystacks

Say hello to smart document storage where all your important information is available at your fingertips. Our innovative platform uses Artificial Intelligence to find any content buried in thousands of documents. Retrieval and Generative AI features allow you to chat, explore, and create new content based on your own domain specific documents.

Get Account   Download Tutorial

To begin, you must first create an account. Click on the Sign Up link in the header or the Get Account button

The next thing you probably want to do is to begin uploading files because without document files, you really can't do anything.

So first, click on the Upload button and you will be given the option to upload Files or Folders. Since we are just getting started, click on the Files option.
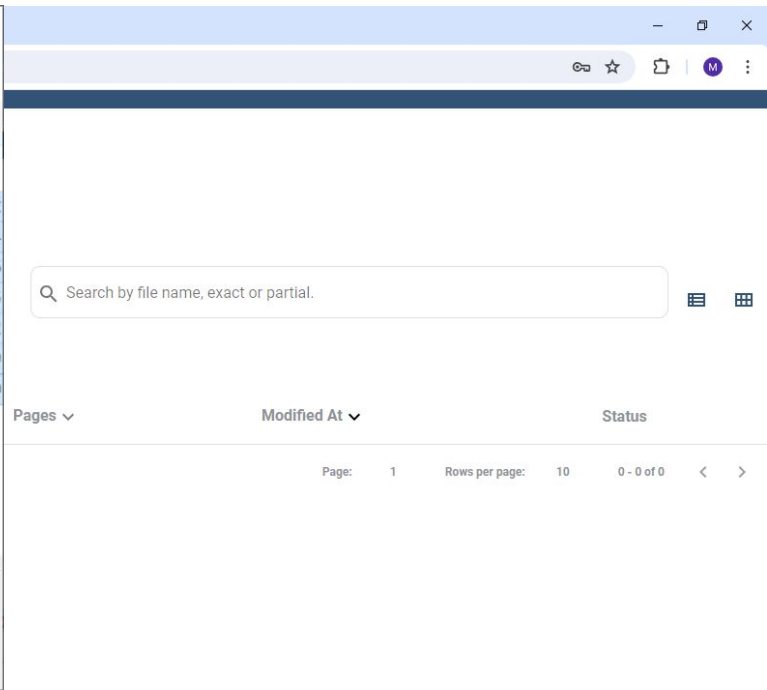

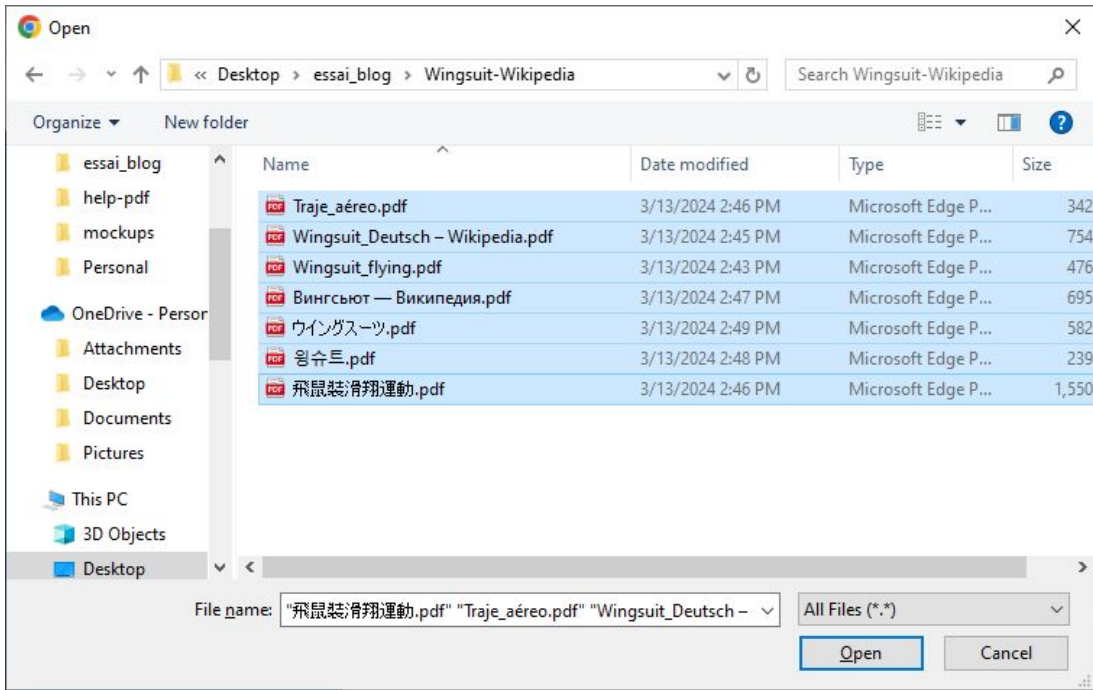

When the file explorer window opens, find a few files that you would like to upload to test on Essentia AI. You can select multiple files using the Shift+click or the CTRL+click.

Wingsuit flying

Wingsuit flying (or **wingsuiting**) is the sport of skydiving using a webbing-sleeved jumpsuit called a **wingsuit** to add webbed area to the diver's body and generate increased lift, which allows extended air time by gliding flight rather than just free falling. The modern wingsuit, first developed in the late 1990s, uses a pair of fabric membranes stretched flat between the arms and flanks/thighs to imitate an airfoil, and often also between the legs to function as a tail and allow some aerial steering.

Wingsuit flyer over fields in the UK

Like all skydiving disciplines, a wingsuit flight almost always ends by deploying a parachute, and so a wingsuit can be flown from any point that provides sufficient altitude for flight and parachute deployment – a drop aircraft, or BASE-jump exit point such as a tall cliff or mountain top. The wingsuit flier wears parachuting equipment specially designed for skydiving or BASE jumping. While the parachute flight is normal, the canopy pilot must unzip arm wings (after deployment) to be able to reach the steering parachute toggles and control the descent path.

Wingsuits are sometimes referred to as "birdman suits" (after the brand name of the makers of the first commercial wingsuit), "squirrel suits" (from their resemblance to flying squirrels' wing membrane), and "bat suits" (due to their resemblance to bat wings or perhaps the aptly named DC Comics superhero Batman and

modern wingsuits. He misled the guards by saying that the experiment was going to be conducted with a dummy. He hesitated quite a long time before he jumped, and died when he hit the ground head first, opening a measurable hole in the frozen ground.[1]

Wingsuit-Wiki

In the mid-1990s, the modern wingsuit was developed by Patrick de Gayardon of France, adapted from the model used by John Carta. In 1997, the Bulgarian Sammy Popov designed and built a wingsuit that had a larger wing between the legs and longer wings on the arms. He tested his prototype in a vertical wind tunnel in Las Vegas at Flyaway Las Vegas. Popov's wingsuit first flew in October 1998, but never went into commercial production. In 1998, Chuck "Da Kine" Raggs built a version that incorporated hard ribs inside the wing airfoils. Although these more rigid wings were better able to keep their shape in flight, this made the wingsuit heavier and more difficult to fly. Raggs' design also never went into commercial production. Flying together for the first time, Popov and Raggs showcased their designs side by side at the World Free-fall Convention at Quincy, Illinois, in August 1999. Both designs performed well. At the same event, jumpers performed formation wingsuit skydives with de Gayardon's, Popov's, and Raggs' suits.

Commercial era

In 1999, Jari Kuosma of Finland and Robert Pečnik of Croatia teamed up to create a wingsuit that was safe and accessible to all skydivers. Kuosma established Bird-Man International Ltd. the same year. BirdMan's "Classic", designed by Pečnik, was the first wingsuit offered to the general skydiving public. BirdMan was the first manufacturer to develop an instructor program. Created by Kuosma, the instructor program's aim was to remove the stigma that wingsuits were dangerous and to provide wingsuit beginners (generally, skydivers with a minimum of 200 jumps) with a way to safely enjoy what was once considered the most dangerous feat in the skydiving world. With the help of Birdman instructors Scott Campos, Chuck Blue, and Kim Griffin, a standardized program of instruction was developed that prepared instructors.[5] Wingsuit manufacturers Squirrel Wingsuits, TonySuits Wingsuits, Phoenix-Fly, Fly Your Body, and Nitro Rigging have also instituted coach training programs.

Technique

Launch

A wingsuit pilot enters free fall wearing both a wingsuit and parachute equipment. The details of a wingsuit launch depend on whether it is a skydive from an aircraft, or a BASE jump from a fixed object.

Exiting an aircraft in a wingsuit requires skills that differ depending on the location and size of the door. These techniques include the orientation relative to the aircraft and the airflow while exiting. It is also important that wingsuit pilots spread their legs and arms at the proper time to avoid hitting the tail or becoming unstable. The wingsuit immediately starts to fly upon exiting the aircraft in the relative wind generated by the forward speed of the aircraft.[6]

Wingsuits in flight

Hi, Welcome to Essentia AI Assistant.

Hi, Welcome to Essentia AI Assistant.

Hi, Welcome to Essentia AI Assistant.

who was the creator of the modern wingsuit?

The modern wingsuit was developed by Patrick de Gayardon of France.
when was it developed?

The modern wingsuit was developed in the mid-1990s.

write a brief summary about the creation of the modern wingsuit

The modern wingsuit was developed in the mid-1990s by Patrick de Gayardon of France, who adapted the design from the model used by John Carta. In 1997, Sammy Popov from Bulgaria designed a wingsuit with larger wings on the arms and a larger wing between the legs. He tested his prototype in a wind tunnel in Las Vegas. In October 1998, Popov's wingsuit made its first flight, but it never went into commercial production. In the same year, Chuck "Da Kine" Raggs built his own version of a wingsuit. In 1999, Jari Kuosma of Finland and Robert Pečnik of Croatia created a safe and accessible wingsuit for all skydivers, which was the first wingsuit offered to the general public. Since then, wingsuit technology has continued to advance, allowing for longer flights and increased maneuverability.
